MAXSafe [®] **SLINGGUARD**

MAXBund 

MAXSorb 

MAXChock 

Sling lifting safety is greatly affected by the use or abuse of the sling.

Eliminate the accidents due to sling failure caused by the load's sharp corners with SlingGuard. The SlingGuard's broad range of products protects lifting slings from the abrasive edges and protrusions of lifted materials or equipment. Beyond improving site safety, SlingGuard provides cost savings with operational efficiency and extended service life of lifting slings.

SLINGGUARD MAGNETIC EDGE PROTECTOR

The SlingGuard Magnetic Edge Protector have embedded magnets to simplify placement on metal loads. These magnets are slightly recessed to prevent their damage and ensure a connection without scratching the painted load surface.

Coil SlingGuard Magnetic Edge Protector

Coil units allow for a secure protector fit within the center and on top of a steel coil. They can be used with wire rope and chain slings and are designed specifically to be used when lifting loads through a bore hole.

Coil
SlingGuard

SlingGuard Center Coil Magnetic Edge Protectors are designed to be used **INSIDE** the bore or the center of a steel coil. The horizontal surface of the center coil unit is convex and fits the inside of a coil.

SlingGuard Top Coil Magnetic Edge Protectors are designed for **THE TOP** of the steel coil. Both the horizontal and vertical surfaces are flat, neither surface is curved.

Coil SlingGuard Magnetic Edge Protector
